Summerschool Goslar 2008

Invited Speakers:

Jürgen König
Universität Duisburg-Essen

Xavier Marie
Institut National des Sciences Appliquées de Toulouse

Laurens Molenkamp
Universität Würzburg

Ernst Rasel
Institut für Quantenoptik, Universität Hannover

Dieter Weiss
Universität Regensburg

A summerschool on semiconductor spinelectronics is offered for Ph.D. students and other members of the DFG Priority Program SPP 1285. The primary aim is to provide young researchers a broad perspective on experimental and theoretical physics of semiconductor spinelectronics. The event will take place from 14 to 17 September 2008 in Goslar (Harz). Both the historic town of Goslar with its Kaiserpfalz as well as the Rammelsberg Mine belong to the Unesco world cultural heritage and are planned to be visited during the summerschool.

Please register until 15 Juni 2008. In order to enroll, all participants of a group should send a joint email to sommerschule@nano.uni-hannover.de. All students are encouraged to contribute a poster presentation of their work. Among all contributions, some will be chosen for oral presentation. Therefore, one abstract per participant should be included in the email.

The venue can be reached on foot from the Goslar train station within about 10 minutes. On 14 September, the summerschool will start with dinner (arrival until 5.30 pm) and will end with lunch on the 17th. The number of participants is limited to about 70. Lodging and tuition is directly paid by the Priority Program. Updated information can be found on the internet page of the SPP at www.spinelektronik.de.

Organization:
